The Global Competence Certification Standard Accreditation Board
hereby attests that

fulfills the requirements of Global Competence Certification Standard

Date of issue: XX.XX.XXXX

Certification validity: from XX.XX.XXXX to XX.XX.XXXX

Certificate number: GCCS/ACR/XXXX/XX/XXX

Director of Accreditation

Core principles of the Global Competence Certification Standard

1. **Interdisciplinary relevance** – the standard validates competences that combine knowledge and skills from multiple domains to reflect modern and emerging job roles.
2. **Learning outcomes orientation** – all certifications are based on clearly defined learning outcomes describing what a candidate knows, understands, and can do.
3. **International comparability** – the system is designed to support comparability of certifications across countries while respecting national legal and qualification frameworks.
4. **National adaptability** – qualifications are implemented in compliance with national qualification frameworks, ensuring that GCCS certifications are recognised within national systems.
5. **Quality and reliability** – certification processes must be consistent, transparent, and evidence-based to ensure credible and reliable assessment results.
6. **Separation of functions** – training, examination, and certification must remain organizationally and decision-wise separated to ensure impartiality and avoid conflicts of interest.
7. **Secure and auditable assessment** – all assessments and exam platforms must ensure data security, process integrity, traceability, and auditability, including supervised online exams where applicable.
8. **Accessibility and inclusion** – the system must ensure fair access to certification through digital accessibility and reasonable accommodations for candidates with diverse needs.
9. **Responsiveness to green and digital transitions** – the standard supports validation of competences relevant to sustainability, green economy, digital transformation, and ICT.
10. **Improvement and governance** – the system must be continuously monitored, reviewed, and improved to maintain relevance, quality, and alignment with international and national standards.
